Business Philosophy

We believe in hard work and our prime business philosophy is "Work hard in silence and keep your success to yourself"

Engagement Models

01 — FIXED PRICE MODEL

For businesses that have well-defined goals and project schedules, fixed price engagement model is the best bet. Under this business model, a fixed price is negotiated between the client and the development company. The fixed cost of the project is linked with predetermined deliverables.

- If you don't have requirement specification, then we have qualified business analyst team to prepare it for them.
- Our business Analyst prepares a detailed Business Requirement Document (BRD). This document includes technical specification, wireframe and business flow of the project.
- Based on finalised BDR, a timeframe and cost estimate is sent to the client.
- Client forwards the requirement definition to back to us.
- World Web provides post-delivery services during and after release, as wanted by the client.
- The development, quality assurance and all other project activities are managed effectively, transparently communicated and delivered with high quality.
- On achievement of the final step of the development, testing, user training is carried out at the customer site if required.

TIME & MATERIAL — 02

When it is difficult to specify the scope, specification and implementation for the development of a project, time and material engagement model is the most attractive option. Under this business model, all the activities are monitored on the hourly basis. And the client is charged according to the predefined hourly rate.

- The Client pays in advance for the hour slots, and these can be of their choice.
- Discussion about requirements and specifications is not a high priority as all this can be decided at any level of project development.
- Client can make use of the purchased hours on the agreed project up to certain time duration
- Client is updated with fair hour log, quick turnaround
- This model is value for money with this model

03 — DEDICATED RESOURCES

With this model, you can access a pool of multi-disciplinary and professional resources that are organized and managed by World Web. These resources are employed in such a way that they meet the business objectives of our clients. This business model is usually used for the projects of long-term partnerships with a significant amount of work.

- Access wide range of qualified designers and experts developers
- Customized IT infrastructure to meet your business needs
- Instant start-up of the project with minimum discussion time
- Instant updates for every step of development and design
- Transparent working and reporting on the progress of the project
